TRUCK ACCESSORIES FEATURE · BED PROTECTION LINEUP

BakFlip

A Full Lineup of Hard Folding and Roll-Up Tonneau Covers

★★★★★ Trusted by truck owners coast to coast

Introduction

BakFlip has built its reputation around a simple promise: keep cargo dry, keep it secure, and open the bed up in seconds when access is needed. The brand's tonneau cover lineup spans five distinct series — MX4, G2, F1, FiberMax, and the roll-up Revolver X4S — each engineered around aluminum or fiberglass panels, tool-free installation, and a low-profile finish designed for trucks from Ford, RAM, Chevy, Toyota, Honda, and Jeep.

Rather than offering a single one-size-fits-all cover, BakFlip organizes its range around different priorities: the MX4 leans into matte-toughness for daily haulers, the G2 delivers proven protection at a more accessible price point, and the F1 offers a premium, paintable finish for owners chasing a showroom-quality look. This structure lets truck owners choose a cover that matches both their vehicle and how they actually use their bed.

The Series Lineup

The MX4 serves as BakFlip's flagship line, built with a matte-finished, UV-resistant top and premium hinges engineered to stay quiet through repeated opening and closing. The G2 is positioned as the trusted, everyday-value option, using the same tri-fold aluminum construction with a proven textured finish at a more accessible price. The F1 steps up to fiberglass-over-aluminum panels, giving it a paintable, ultra-clean finish suited to owners who want their cover color-matched to their truck.

Beyond these three, the FiberMax uses lightweight fiberglass panels to maximize strength without adding bed weight, while the Revolver X4S takes a different mechanical approach entirely — an aluminum roll-up design with automatic rotational locking rails, aimed at owners who want a cover that rolls open rather than folds.

Series at a Glance

Series	Defining Feature
MX4	Flagship matte-finished aluminum, premium hinges, quiet-close panels
G2	Trusted tri-fold value option with textured aluminum finish
F1	Fiberglass-over-aluminum, paintable premium finish
FiberMax	Lightweight fiberglass panels, maximum strength-to-weight
Revolver X4S	Aluminum roll-up design with rotational locking rails

Construction and Engineering

Every hard-folding BakFlip — MX4, G2, F1, and FiberMax — is built on aluminum panels with heavy-duty hinges and a fully sealed core, an approach intended to prevent sagging, tearing, and soft spots even after a full season of regular loading. UV- and scratch-resistant finishes protect the panel surface, while weather-tight seals run along all four bed edges. Integrated drain tubes are built into the design to route water out of the bed rather than letting it pool, reinforcing the covers' weather resistance in everyday driving conditions.

Installation Across the Lineup

BakFlip covers are designed for driveway installation rather than a professional shop visit. Precision-engineered rails clamp directly to the truck bed with no drilling required, and each cover ships as a truck-specific fit, so panels are designed to line up correctly on the first attempt. Most owners complete installation in 20 to 30 minutes using the included clamps and basic hand tools, with model-specific fitment available for the F-150, RAM 1500, Silverado, Tacoma, Tundra, Ridgeline, Maverick, and Gladiator.

Security and Weather Sealing

Across the lineup, automatic rear latching engages the moment the cover is closed, meaning a locked tailgate keeps the entire cover locked as well — without requiring separate manual clamps or straps for daily use. Most covers ride at a 1-inch profile for cleaner styling and reduced aerodynamic drag, and the covers are designed to be compatible with BAKBox toolbox systems and BakFlip ladder rack attachments for owners who want to add extra storage or hauling capacity.

What Owners Are Saying

Feedback across the lineup highlights quick, driveway-friendly installation, a factory-like fit and finish, and reliable weather sealing across varied conditions — from long highway drives to worksite use.

> *"Installed the MX4 on my F-150 in about twenty minutes right in my driveway. The matte finish looks factory, and after six months of hauling firewood and rain, it still seals up bone dry."*
>
> **— Marcus D., Ford F-150 Owner**

> *"The Revolver X4S rolls up in seconds when I need the full bed for lumber, then locks down flat for the highway drive home. Best tonneau I've owned on any of my trucks."*
>
> **— Angela P., Chevy Silverado Owner**

Frequently Asked Questions

What's the difference between the MX4, G2, F1, and FiberMax?

All four use aluminum-panel hard-folding construction. The MX4 offers a matte, UV-resistant flagship finish; the G2 is the value-focused tri-fold option; the F1 features a paintable fiberglass-over-aluminum finish; and the FiberMax uses lightweight fiberglass for maximum strength without added weight.

Will a BakFlip cover fit my truck?

Covers are engineered as truck-specific fits for Ford F-150, RAM 1500, Chevy Silverado, GMC Sierra, Toyota Tacoma, Toyota Tundra, Honda Ridgeline, Ford Maverick, and Jeep Gladiator across most model years and bed lengths.

Do I need to drill into my truck bed?

No — every BakFlip cover installs using tool-free, clamp-on rails, with most installations completed in 20 to 30 minutes using basic hand tools.

Can a BakFlip be used with a toolbox or ladder rack?

Yes. The BAKBox toolbox mounts under the cover at the front of the bed, and the BakFlip CS tonneau cover integrates a rack system for owners who need added hauling capacity.

Conclusion

BakFlip's lineup gives truck owners a genuine choice rather than a single fixed formula — matte-tough daily durability with the MX4, dependable everyday value with the G2, a showroom-ready paintable finish with the F1, lightweight strength with the FiberMax, or roll-up convenience with the Revolver X4S. Across every series, the shared foundation of clamp-on installation, automatic latching, and weather-sealed aluminum construction is what has built the brand's reputation among truck owners for reliable, long-term bed protection.
